Architecture of .NET Framework

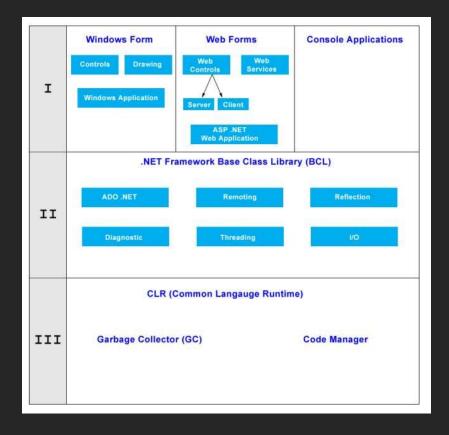

The two major components of .NET Framework are the Common Language Runtime and the .NET Framework Class Library.

- The <u>Common Language Runtime (CLR)</u> is the execution engine that handles running applications. It provides services like thread management, garbage collection, type-safety, exception handling, and more.
- The <u>Class Library</u> provides a set of APIs and types for common functionality. It provides types for strings, dates, numbers, etc. The Class Library includes APIs for reading and writing files, connecting to databases, drawing, and more.

Another important component is : Languages.

Architecture of .NET Framework

Latest Versions

- Latest version of .NET framework is : .NET Framework 4.8.1
- Latest version of .NET is: 6.0
